Multiple perspectives

Valuable learning

ONLINE – highly interactive

LEVEL 2 EuSim Simulation Instructor Course Online course starting March 3rd, 2023

You have your simulation practice, but want to improve. You want your simulations to be even more goal-oriented. You want your simulations to help your learners to make a difference for patient safety and quality of care. You want to learn to tune into different participants and to deal with difficulties during simulation-based trainings. Then, we have the course for you. Online, interactive, intense and up-to date.

Our international and multi-professional faculty has extensive experience in faculty development with the area of simulations in healthcare. We drive conceptual thinking and practice on simulation, human factors, patient safety and pedagogical aspects – face-to-face, as well as remotely.

The course is based on sound learning goals, relevant topics and provides ample interactivity and reflection. The online parts build on your established face-to-face practice. The spaced sessions planned allow you to try out things and to reflect on your tryouts in the online meetings.

The course addresses experienced simulator instructors who want to develop their skill in running simulation courses that help participants reflect on their actions. During this online course participants will experience various learning formats including lectures, workshops, guided reflections, and exercises. The course also includes one hour of one to one coaching for each participant with a simulation expert within the international EuSim network. Small groups and modern software systems allow for intense contact between the course faculty and fellow course participants. The course language is English, requiring a level that allows taking part in discussions and reflections. However, there will be simultaneous translation for Spanish speaking participants. The translation will only be heard by those who actively choose it, and can be switched on and off at any time.

Target Group Experienced simulation faculty, who have established a simulation practice and who should

- feel comfortable running scenarios and debriefing
- have led at least 35 simulation debriefings

Course Goals After completing the course, participants are able to

- guide goal-oriented simulation sessions
- use different approaches and tools to facilitate reflection
- reflect on how own patterns (thinking, behaviour, habits, reaction and understanding) can influence simulation training
- deal with challenging situations in simulation trainings
- embed human factors/NTS/CRM in the simulation training
- foster transfer of new insights into clinical practice

Course Dates and Content

March, 3rd,	13.00-18.00 CET,	Session 1, Kick-off
March, 10th,	13.00-18.00 CET,	Session 2, Toolbox
March, 17th,	13.00-18.00 CET,	Session 3, Facilitator role
March, 24th,	13.00-18.00 CET,	Session 4, Challenging debriefing
March, 31st,	13.00-18.00 CET,	Session 5, Human Factors

One hour individual coaching session on separately agreed time.

The course is based on 24 educational hours and approximately 20 hours of self-study and reflection.

Costs The cost for participation, the course material, as well as the certification of attendance is € 1.350,00.
